First CPU Idle
Time to Interactive 27.5 s
Max Potential First Input Delay 4,300 ms

Eliminate Render-Blocking Resources

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. [Learn More](#)

Efficiently Encode Images

Optimized images load faster and consume less cellular data. [Learn More](#)

Enable Text Compression

Potential savings of 61 KiB

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn More](#)

Serve Static Assets With An Efficient Cache Policy

25 resources found

A long cache lifetime can speed up repeat visits to your page. [Learn More](#)

Reduce The Impact Of Third-Party Code

Third-party code blocked the main thread for 3,100 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. [Learn More](#)

Total Blocking Time

11,670 ms

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

Reduce Javascript Execution Time

18.9 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Defer Offscreen Images

Potential savings of 2 KiB

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. [Learn More](#)

Server Backend Latencies

210 ms

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. [Learn More](#)

Properly Size Images

Potential savings of 156 KiB

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn More](#)

Reduce Unused Css

Potential savings of 42 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn More](#)

Avoid Enormous Network Payloads

Total size was 3,438 KiB

Large network payloads cost users real money and are highly correlated with long load times. [Learn More](#)

Minimize Main-Thread Work

29.4 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Avoid Chaining Critical Requests

3 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. [Learn More](#)

Avoid An Excessive Dom Size

3,116 elements

A large DOM will increase memory usage, cause longer [Learn More](#)

Avoid Multiple Page Redirects

Potential savings of 1,550 ms

Redirects introduce additional delays before the page can be loaded. [Learn More](#)

Minify Javascript

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn More](#)

User Timing Marks And Measures

4 user timings

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. [Learn More](#)

Network Round Trip Times

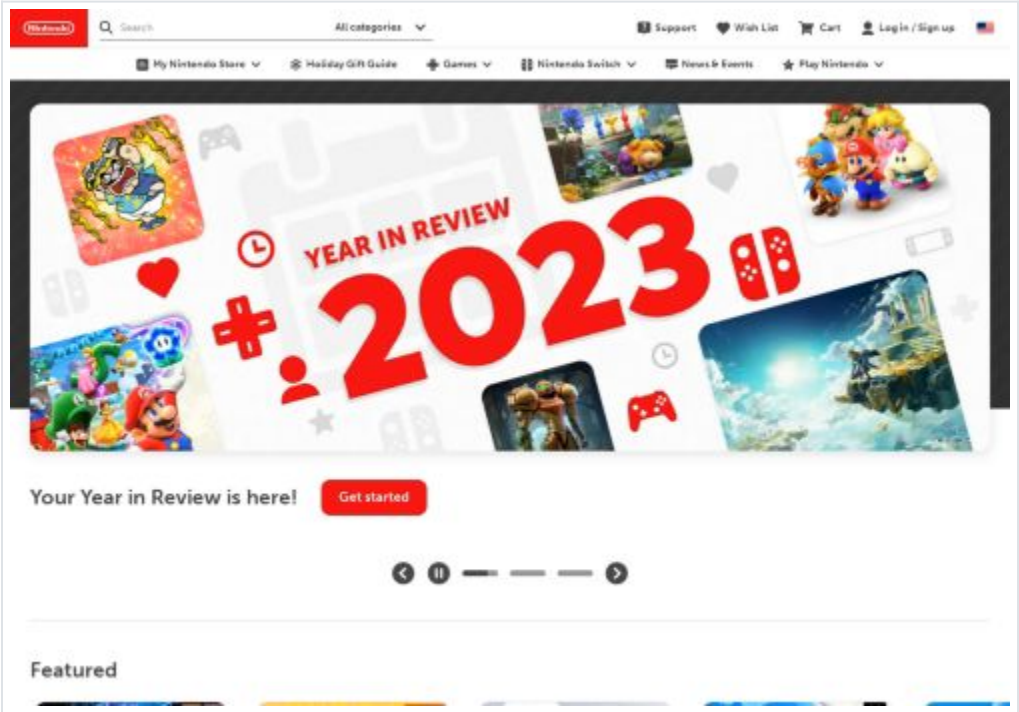

260 ms

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. [Learn More](#)
